

Policy 4 - Energy and Water Conservation Resolution

WHEREAS, energy and safe drinking water are finite resources; and,

WHEREAS, without these vital resources, the economy of our area and the health of our community's citizens and visitors would be seriously and adversely affected; and,

WHEREAS, we acknowledge and accept our responsibility to conserve and protect these resources,

NOW, THEREFORE, be it resolved by this governing body of the WEBB CREEK water utility system that upon commencement of the Energy and Water Conservation Program survey and audit, as provided by the Tennessee Department of Economic and Community Development and the Tennessee Association of Utility Districts, this water utility system shall be operated and maintained in such manner as may be necessary and economically feasible to prevent future waste of energy and potable water. Such operation and maintenance shall include, but not be limited to, the prompt repair of potable water production, distribution, and metering facilities found deficient in said survey and audit. Further, routine maintenance shall be provided, insofar as is economically feasible, to prevent the recurrence of excessive unaccounted-for-water and water leakage with its attendant waste of energy.

PASSED on motion duly made, seconded, and vote of 3 ayes to 0 nays by the governing body of WEBB CREEK UTILITY DISTRICT water utility system, this 5 day of AUGUST, 1992.

SIGNED R.M. BISHOP, JR.. PRESIDENT
